

Part one: accounting

1- As a learner for a course on designing accounting databases, create a database for (choose one)

- private hospital
- Contracting company
- Drug store
- Feed Company
- Pharmacy

Your design should include

- 1- Initial design steps and reports expected to be produced from the database
- 2- Tables that must be created, fields in each table, and the primary key fields in each table.
- 3- How will the tables be linked and the types of relationships between them?
- 4- Forms that you will use in the database.
- 5- The necessary queries for each database.
